

STRUCTSOLVE

ENGINEERING

Welcome to StructSolve Engineering, your trusted partner for comprehensive basement observations. Our mission is simple: Safeguard your home's foundation and provide you with the peace of mind you deserve. Led by a team of seasoned professionals, we specialize in thorough assessments that go beyond the surface, ensuring the structural integrity of your property.

A basement observation is a critical step for every homeowner, offering invaluable insights into the health of your foundation. From identifying hidden moisture issues to assessing structural stability, our observations cover a wide range of factors that can impact the safety and longevity of your home.

During the observation process, our experienced engineers meticulously examine every aspect of your basement, including:

- **Foundation Integrity:** We assess the condition of your foundation walls and floors, looking for signs of cracking, shifting, or other structural concerns.
- **Moisture and Water Intrusion:** Our team identifies any sources of moisture infiltration, such as leaks, seepage, or condensation, which can lead to mold growth and structural damage.
- **Structural Support:** We evaluate the adequacy of your basement's support systems, including beams, columns, and load-bearing walls, to ensure they can withstand the weight of your home.
- **Electrical and Mechanical Systems:** In addition to structural concerns, we observe electrical and mechanical components in the basement, such as wiring, plumbing, and HVAC systems, to identify any safety hazards or code violations.

Why do you need a PE stamped observation? A Professional Engineer (PE) stamp adds credibility and assurance to your observation report, signifying that a qualified and licensed engineer has conducted it. With a PE stamped observation from StructSolve Engineering, you can trust that your assessment meets the highest standards of accuracy and reliability.

What happens if you don't have a PE stamped observation? Without a thorough and impartial assessment of your basement's condition, you risk overlooking hidden issues that could lead to costly repairs or safety hazards. Additionally, unscrupulous contractors may take advantage of uninformed homeowners, upsell unnecessary services, or exaggerate problems for financial gain.

StructSolve Engineering is committed to honesty, integrity, and impartiality. Unlike basement contractors who may be vested in selling you their services, we provide unbiased observations and recommendations based solely on the facts. We don't recommend basement installers, and we maintain complete independence from interested parties, ensuring that our observations are always in your best interest.

Don't leave the safety and integrity of your home to chance. Schedule a PE stamped basement observation with StructSolve Engineering today, and rest assured knowing that your property is in expert hands.

Best Regards,
